Forms Checklist NOP § 205.2 - § 205.406

Please note that these forms are suggested templates; please contact your certifier for approval of the forms you plan to use. Please provide thorough descriptions that reflect all your current and planned practices. National Organic Program (NOP) regulations require Organic System Plans (OSPs) to be reviewed and updated annually. Whenever you anticipate a change in your operation's practices, procedures or materials, please update and re-submit the sections or pages that reflect that change. This forms checklist must be submitted along with your application, Organic System Plan, and all other forms indicated below.

Description of Organic Production		
Please provide a brief, general description of your organic crops or crop types and cropping systems; livestock raised ar crop and livestock production; and type(s) of marketing and	nd animal products; any handling activities related to your

#### **Natural Resource Management**

NOP § 205.2 Organic production, Natural resources of the operation § 205.200, § 205.203, § 205.239, § 205.240

#### Key NOP standards related to natural resource management:

#### § 205.2 definitions:

**Organic production.** A production system that is managed in accordance with the Act and regulations in this part to respond to site-specific conditions by integrating cultural, biological, and mechanical practices that foster cycling of resources, promote ecological balance, and conserve biodiversity.

**Natural resources of the operation.** The physical, hydrological, and biological features of a production operation, including soil, water, wetlands, woodlands, and wildlife.

- § 205.200: Production practices implemented in accordance with this subpart must maintain or improve the natural resources of the operation, including soil and water quality.
- § 205.203(a): The producer must select and implement tillage and cultivation practices that maintain or improve the physical, chemical, and biological condition of soil and minimize soil erosion.
- § 205.203(c): The producer must manage plant and animal materials to maintain or improve soil organic matter content in a manner that does not contribute to contamination of crops, soil, or water by plant nutrients, pathogenic organisms, heavy metals, or residues of prohibited substances.
- § 205.206(b)(2): Pest problems may be controlled through mechanical or physical methods including but not limited to the development of habitat for natural enemies of pests. [See also § 205.206(a)(2)]
- § 205.239(b)(4): The producer of an organic livestock operation may provide temporary confinement for an animal because of risk to soil or water quality. [See also § 205.239(a)(3)]
- § 205.239(e): The producer of an organic livestock operation must manage manure in a manner that does not contribute to contamination of crops, soil, or water by plant nutrients, heavy metals, or pathogenic organisms and optimizes recycling of nutrients and must manage pastures and other outdoor access areas in a manner that does not put soil or water quality at risk.
- § 205.240(c)(8): The pasture plan shall include a description of the erosion control and protection of natural wetlands and riparian areas practices.

Organic standards specifically address soil (conservation and health) and water (conservation and quality; contamination prevention). As quoted above, the standards also include a general requirement to maintain or improve natural resources (soil, water, wetlands, woodlands and wildlife) by integrating cultural, biological and mechanical practices to foster cycling of resources, promote ecological balance, and conserve biodiversity. Organic production practices must maintain or improve their natural resources.

While natural resource management is a core organic standard, producer strategies will be specific to each site and type of production. Each operation's practices are adapted to the features of the land and local conditions, especially related to: soil (soil types, slope, risks of erosion, and overall health); water (position in the watershed, presence of water courses and riparian areas, and water availability or scarcity); and wetlands, woodlands and wildlife (ecosystem type, biological diversity and habitat on and around the farm).

Organic farming practices can conserve soil, increase soil health, protect water and contribute to biological diversity within—and often beyond—its boundaries. On-farm practices may include: soil building to increase organic matter, humus, biological activity and diversity of soil organisms; water conservation to benefit domestic/native species and riparian ecosystems; inclusion of a diversity of flowering plants, habitat or shelter for pollinators, insects, other arthropods, spiders, bats, raptors and other pest predators; planting diverse pastures; non-lethal livestock predator control; wildlife friendly fencing; monitoring and control of specific non-native invasive species; establishment of grassed waterways, hedgerows or other plantings to check erosion and foster habitat; wetland and riparian area protection; native habitat restoration; or efforts to promote wildlife migration corridors and conservation.

Farm / Ranch / Business Name	Date

As you describe your natural resource management practices, please note that some of your answers to questions about natural resource management may be relevant to other sections of this OSP as they relate to crop rotation, nutrient and manure management. The following questions are intended to address general, whole-farm goals and approaches to organic natural resource management.

1. Please describe how your farming or ranching practices—crop and/or livestock production practices—maintain or improve natural resources, foster cycling of nutrients, promote ecological balance, and conserve biodiversity. Please list the specific strategies or practices you use that contribute to each general goal listed below, as applicable.

a. Conserve soil; Improve soil condition; Prevent soil erosion.
b. Prevent water contamination by plant nutrients; Protect water quality.
c. Conserve water
d. Conserve biodiversity (soil organisms, pollinators, natural enemies of pests, predators, native habitat, vegetation and wildlife).
e. Other practices that maintain or improve natural resources (soil, water, wetlands, woodlands and wildlife), foster cycling of nutrients, promote ecological balance, and conserve biodiversity.

Recordkeeping, Audit Trail and Labeling

NOP § 205.103, § 205.201, § 205.205, § 205.300-311

#### **Records Kept**

Please note that if you produce both organic and non-organic crops, then you have a split operation. If you raise the same crops as both organic and non-organic, then you also have parallel production. If you are a split operation of any type, please be prepared to show all production and sales records at your inspection that allow for tracking and production verification of non-organic crops as well as organic crops (crop lists and acreages, input application records, equipment use and cleaning, harvest and sales records, etc.) Such records are necessary to facilitate production verification audits, and are especially important if the crops are visually indistinguishable (parallel production).

1.	. What types of records do you keep? Indicate all that apply. In order to document practices described in your OSP, you will need all records available for inspection. Some records must be documents from other businesses (such as seed and input purchase receipts, suppliers' organic certificates, and soil or tissue test results). Others will be your own records of on-farm activities. You may design your own forms, or use/adapt templates or sample documentation forms available from the NOP, organic certifiers, or other sources, provided they include information needed to document compliant practices.
	Record of purchase or acquisition records for all inputs (e.g. receipts, delivery tags, custom applicator invoices)
	Input application records that show all materials applied to soil, water and crops (fertilizer and soil inputs, pest management materials and post-harvest handling), including product name/formulation and manufacturer, application date, rate or quantity, crop and location
	Seed, seedling, and planting stock, inoculant or seed treatments; seed-saving/propagation records; documentation of commercial non-availability of organic seed/non-GMO status of seed
	Copies of organic certificates from suppliers (i.e. organic seedling or transplant producers)
	Planting and/or field activity records that show crop rotation including cover crops/green manures
	Activity and/or observation records (i.e. field log, notes on calendar or maps)
	Manure use records showing interval between date of application and harvest date of crops grown for human consumption
	Compost production records (composting system, ingredients, C:N ratio, temperature, turnings)
	Monitoring records (soil or tissue tests, water tests, pest observation logs)
	Cleaning records (required if application or harvest equipment is not dedicated to organic)
	Harvest records (records show location, crop, date harvested and transported from the field)
	Post-harvest activities (washing and grading product, bagging or boxing, etc.)
	Storage records (e.g. delivery/receiving tags showing facility location, crops, quantities, post-harvest activities and pest control)
	Shipping records (e.g. packing facility tags, delivery receipts, receiving documents, bills of lading)
	Sales records (e.g. invoices, purchase orders, grower statements, inventory lists)
	Others (describe):

<b>5</b> , 1

#### **Greenhouse Crop Production**

#### NOP § 205.2, § 205.201(a)(5), § 205.202(c)

Please complete this Greenhouse Crop Production OSP along with your other applicable Crop OSP forms if you produce organic seedlings, transplants, or crops in a greenhouse, hoophouse or coldframe.

1. Please indicate the scope of your greenhouse operations.
Greenhouse crop production is part of my farming operation and located on certified organic land. Please show your greenhouse location and size on your farm map.
This operation consists primarily or exclusively of greenhouse production. Please submit a separate Land Requirements form for your greenhouse operation, with a Map showing the production area, location and size of greenhouses, shade or lath houses, outdoor areas, material storage area, irrigation system, soil mixing and seeding equipment, product staging, packing, cooling and loading areas, as applicable.  Land Requirements Form (A4) attached
2. Please describe your greenhouse structure type(s). Check all that apply.
Hoop house(s) Cold frame(s)
Greenhouse(s) Other (describe):
3. Please describe your greenhouse crops. Check all that apply.
Annual transplants or starts  Perennials—planting or sale of whole plants as organic
Harvested crops (e.g. fruits, vegetables, cut flowers, herbs
4. Are greenhouse crops grown in soil?  No Yes
5. <b>Are crops grown in planting medium?</b> No Session Yes Include all components of the potting soil or planting medium mixture on your Materials List.
6a. <b>Do you produce both organic and non-organic greenhouse crops?</b> $\square$ No, organic only $\square$ Yes
6b. <b>Is your organic greenhouse adjacent to non-organic greenhouse production areas?</b>
7. If Yes to question 6a or 6b, please address each potential risk listed below by describing the management practices and physical barriers you use to prevent commingling or contamination.
7a. <b>Planting Medium</b> (including soil mix materials, wetting agents and fertilizer materials) storage areas, soil mixing, container/tray filling and seeding equipment.
7b. <b>Production or Growing Areas</b> —separation and identification.
7c. <b>Plant and Container Identification</b> —labels and tags.
7d. Irrigation system: Identify your water source. Describe your use of water with respect to fertilizer materials and equipment. If water lines are shared, attach a diagram of piping, pumps, valves and backflow preventers, as applicable.  Diagram attached Not Applicable; Separate equipment and water lines, dedicated to organic.

#### **Crop Post-Harvest Handling**

#### NOP § 205.2 Handling, § 205.270(a), § 205.271

Use this Crop Post-Harvest Handling OSP to describe the activities to be included in your crop production certification. This form is intended for use by operations that handle only their own product and whose activities preserve the essential form of the product, such as washing, packing, cooling and storing produce, drying grain, and seed cleaning or preparing raw agricultural product for market or farm use.

Use Handler OSP forms if you handle crops or multiple-ingredient products not produced on your farm, or if your activities include complex handling activities, such as cooking, baking, curing, churning, separating, distilling, extracting,

manufacturing, canning, etc.
Please contact your certifier for clarity about which forms to use.
1. <b>Describe the type(s) of post harvest handling you do</b> (for example, grading, dry pack, wet packing line, flume washing of vegetables, grain cleaning, etc.)
2. What type(s) of crops are handled in your post harvest handling facility?
Cleaning and Sanitation
3. Describe how you clean your post harvest handling area including any food contact surfaces.
a. List all cleaning materials you use or plan to use in the Materials List below.   Listed
b. <b>If you have a Standard Sanitation Operating Procedure (SSOP)</b> , you may attach a copy of the portion that covers equipment and organic food contact surfaces.
Water Use
4. <b>Do you use water to clean crops or food contact surfaces?</b> Tyes No If No, skip to question 9.
5. If Yes, identify water source and indicate how it is used.
to clean facility to clean food contact surfaces other (describe):

### **Livestock Living Conditions**

NOP § 205.239, § 205.240

Organic Livestoc	k Living Cond	itions

Organic Livestock Living Conditions  1. Describe the locations and living conditions for each class of organic livestock, including pastures or range, outdoor and indoor feeding yards, feeding pads, feedlots, housing and/or shelter.
2. <b>Describe how the housing or shelter you provide for each type/class of livestock is designed</b> to allow for natural maintenance, comfort behaviors (i.e. non-isolation of herd animals, dust baths for poultry) and opportunity to exercise; temperature control, ventilation, and air circulation; and reduction of potential for injury.
3. Describe how you manage yards, feeding areas and lanes to keep them well-drained and clean, and to prevent runoff of wastes and contamination of water, or drainage across property boundaries.
4. Describe the locations and sources of shade within outdoor access areas.
5. <b>Describe the source(s) of clean drinking water,</b> water delivery systems or equipment, and location(s) of drinking water for livestock in housing, outdoor areas and on pasture (as applicable).
6. <b>If you add anything to livestock water, please list each additive or material(s),</b> indicate its acceptability for use in organic production (allowed or restricted), the amount or concentration, and frequency of use.   N/A; no materials used in water

Farm / Ranch / Business Name		Date		
7. Please identify all water sources within or adjacent to the property. Describe how you prevent erosion around water sources, damage to natural wetlands and riparian areas, and risks of contamination of water.				
8. <b>List the types of bedding used for each o</b> the source (if purchased), and the certifie		her they were produced on-farm or purchased, d as bedding must be certified organic.		
Treated Lumber  9. Lumber treated with arsenate or other prohibited materials: Identify any locations of existing (previously installed) treated lumber and its approximate age. Also list locations where you have used treated lumber in new installations or for replacement purposes, and describe how you prevent contact with soil or livestock (including crops or livestock feed).  N/A; No treated lumber				
Outdoor Access and Temporary Confinement  10. Describe outdoor access for each type and class of animal you manage.				
Animal type & class	Average number of hours per day animals are outdoors	Explanation of seasonal variations		

Farm / Ranch / Business Name	Date

11. Describe the circumstances (specify by each class of livestock you manage) under which you plan to temporarily confine animals (i.e. stage of life, health and safety, risk to soil or water quality, preventative healthcare, sorting or shipping animals). Indicate which animals are confined, and duration and place of confinement.

Reason for confinement	Circumstances/location of temporary confinement from the outdoors	Approximate length of time: days/hours
Inclement weather (that could cause hardship to livestock)		
Stage of life (describe):		
Animal health, safety or well-being		
Preventive healthcare or treatment of illness or injury (describe specifics)		
Management: sorting, shipping or sales		

12. Describe the record-keeping system you use to track tem	porary confinement of animals. You must have records
available for inspection showing time periods and reasons	is for any temporary confinement.

#### Livestock Recordkeeping, Labeling and Audit Trail

NOP § 205.103, § 205.201, § 205.300-311

Organic livestock producers must maintain records sufficient to preserve and track the identity of all organic animals and animal products produced in the operation. Records must disclose all activities and transactions in a manner that can be readily understood and audited. They must be sufficient to demonstrate compliance, kept for at least 5 years, and available for inspection.

If you produce both organic and non-organic crops and/or livestock, then you have a split operation. If you raise the same crops or livestock as both organic and non-organic, then you also have parallel production. If you have a split operation of any type, please be prepared to show all production and sales records at your inspection that allow for tracking and production verification of non-organic crops as well as organic crops (crop lists and acreages, input application records, equipment use and cleaning, harvest and sales records, etc.) Such records are necessary to facilitate production verification audits, and are especially important if the crops are visually indistinguishable (parallel production).

1. **Indicate all the records you keep** by checking boxes for general categories, and describing your records, as needed. Please be prepared to show all records and audit trail documents you have checked and described below at your inspection.

### Livestock purchase records Organic certificates for livestock purchased as organic Animal reproduction: breeding, birth and/or hatch records Herd conversion / Organic management records: living conditions, feeding and health care **Livestock Living Conditions and Natural Resource Management** Outdoor access / Temporary confinement records Bedding material source(s) documentation Housing maintenance or construction Yard / Lane maintenance Erosion prevention and/or control Manure management records Activity and observation records (field logs, notes on calendar or maps, etc.) Monitoring records (soil / tissue / water tests, pest/parasite monitoring, observation logs) Natural resource restoration, Invasive species management, Native plant / wildlife monitoring Livestock Feed/Feed Supplements and Additives/Pasture Management and Grazing Practices Feed purchase records (receipts, feed tags, labels, delivery/weigh tags, etc.) Feed production records (harvest, baling, etc.) Feed additive and/or supplement records (labels, purchase receipts, use, etc.) Feed storage/inventory records (location or facility, post-harvest activities, pest control, etc.) Feed ration descriptions for each type and class of animal Feeding records: actual quantities of feed fed to each type and class of animal Pasture improvement and/or grazing management records Dry matter content analysis of feed

Farm / Ranch / Business Name	Date

### **On-Farm Handling of Livestock Production**

NOP § 205.2 Handling, § 205.270(a), § 205.271

your livestock production, such as: preparing feed for your own livestock (making silage / baleage, mixing or grinding feed); milking animals / cleaning milking equipment / cooling and storing milk; washing / packing eggs; or initial fiber processing to prepare product for use or sale. If you do complex handling (slaughter, cheesemaking, etc.) and/or handle crop or livestock products for other producers, please request appropriate OSP forms from your certifier to apply for Handler certification.
Handling Location, Activities and Products
1. List the handling activity(ies) and product(s) covered by this OSP section.
2. Identify the location(s) (area(s) or facility(ies)) where handling is done. If you contract for services, list the name and
location of the facility used, and attach a copy of their organic certificate. You need not complete the remainder of this form.   Organic certificate attached
3. Attach a location map (8.5 x 11") for your handling area(s) including a description or depiction of product flow to show the sequence of handling steps. Identify all containers, equipment and storage areas.  Map with flow description or depiction attached
4. At this handling location, do you handle or store:  Organic products only?
<ul><li>Distinct organic and non-organic products?</li><li>Parallel products (identical organic / non-organic products)?</li></ul>
Pest Management and Materials
5. List recurrent or potential pest problems in and around your handling areas or facilities (i.e. flying or crawling insects, rodents, birds, etc.)
6. Describe the strategies you use or plan to use to prevent, manage or minimize pest problems in your handling areas or facilities (wherever handling activities, cooling and/or product storage occurs). Include monitoring methods and frequency, preventative, mechanical and physical practices.
