Introduction

The Center for Agribusiness and Economic Development was contracted to conduct an interest survey among cattle producers residing within a 100 mile radius of Carrollton, Georgia which includes parts of Alabama. The purpose of the study was to gauge the interest of cattle producers in forming a cooperative to produce, process, and market grass-fed beef products. In addition to determining producer interest, the survey was used to collect information on the number of cattle that might be committed by these producers to the cooperative for processing and marketing and any premium that they might require to produce cattle in this manner. The numbers to be committed are important due to the need for the cooperative to know what size of slaughter facility would have to be constructed or purchased. In addition, having a consistent supply of beef would increase the cooperative's efficiency and keep their costs low.

Current Cattle Statistics and Types of Operations

Information was collected on the number and types of cattle operations in the defined geographic area through the use of a phone survey. Each respondent was first asked if they had cattle on their property in July of 2005 with the logic being that only current cattle producers were most likely to be interested in the production of grass-fed cattle. Of the 150 respondents, 97% indicated they had cattle on their farm in July of 2004.

Given that the identified cattle producers were in operation in 2004, it was important to determine what types of cattle operations they were running. The vast majority of cattle producers were involved in cow-calf operations. There were very few back-grounding operations (5%) and finishing operations (1%), as can be seen in Table 1.

	Number	Percentage
Q2. Cattle On Property July 04	136	96.50%
Q1.1 Cow-Calf Operation	129	87.50%
Q1.2 Back-grounding	8	5.40%
Q1.3 Finishing	2	1.40%

Cattle Breakdown by Category

The respondents were then asked to provide a breakdown of the cattle that they had on their farm in July of 2004. Those respondents were then given five categories and asked to provide an estimate of how many cattle they had in each category. The categories were:

1. Brood Cows, including heifers that had calves.
2. Heifer, steer, and bull calves weighing less than 500 pounds, including newborn calves.
3. Bulls weighing 500 pounds or more.

4. Heifers that had not calved, weighing 500 pounds or more?
 - i. For beef cow replacement?
 - ii. For milk cow replacement?
 - iii. Other heifers 500 pounds or more?
5. Steers weighing 500 pounds or more

It appears that the majority of the respondents have bulls weighing over 500 pounds and heifers for beef cow replacements. This is consistent with the earlier finding that the majority of respondents operated cow-calf operations. About a quarter of the respondents indicated that they had steers weighing over 500 pounds in their operation. The results can be found in Table 2.

Cattle Numbers	Bulls > 500 lbs	Heifers for beef cow replacement	Heifers for milk cow replacement	Other heifers > 500 lbs	Steers > 500 lbs	Cows shipped to slaughter	Other heifers > 500 lbs
	n=131	n=93	n=103	n=131	n=128	n=130	n=133
	%	%	%	%	%	%	%

26 - 35	1%	5%	2%	2%	3%	2%	4%
36 - 45	2%	9%	0%	2%	1%	0%	5%
46 - 55	0%	5%	0%	0%	0%	1%	2%
56 - 65	2%	0%	1%	2%	2%	1%	6%
66-75	0%	0%	0%	1%	0%	0%	2%
76-85	2%	2%	0%	0%	1%	0%	2%
86-100	2%	0%	0%	2%	0%	0%	1%
101-125	1%	0%	0%	1%	0%	0%	2%
126-150	2%	0%	0%	1%	2%	1%	4%
150+	2%	2%	1%	1%	3%	2%	5%
Mean	18	18	8	12	28	17	42
Median	3	6	0	0	0	0	0

The results in Table 2 are consistent with the small herd sizes found in Georgia and Alabama.

Calves Shipped Directly to Slaughter

The majority of the respondents do not ship cattle directly from their farms to slaughter as revealed in Table 3. On average, 17 cattle are shipped directly from the farm to slaughter but this figure is skewed toward the large producer. The median of zero cattle shipped directly for slaughter is more representative of the respondents.

Table 3. Calves Shipped Directly from Operation to Slaughter	
Calves	n=133
	%
None (0)	82%
1-15	8%
16 - 25	2%

86-100	0%
101-125	0%
126-150	1%
150+	2%
Mean	17.41
Median	0

Cattle Finished on Grass

The study also wanted to determine if any producers were currently finishing cattle on grass. On average, the respondents indicated they were finishing 42 cows on grass. However, this number is weighted toward large producers and the median appears to represent under the number of cattle being finished on grass. There are a number of cattle producers in the market area finishing cattle on grass indicated by the fact that 46% of the respondents reported finishing one or more cows on grass.

Table 4. Number of Cattle being Fattened (finished) on Grass

101-125	2%
126-150	4%
150+	5%
Mean	42.37
Median	0

Willingness to Produce Grass Fed Beef at a Premium

The respondents were asked if they would be willing to producers that were willing to produce grass fed beef for a price premium given that it would take 20 months from birth to fatten a calf on grass. Thirty-two percent of the respondents indicated that they would not produce grass fed beef for any of the per pound premiums found in Table 5 . However, there are a significant number of producers that are willing to produce grass fed beef for the right price.

Over one-third of the respondents would be willing to produce grass fed beef for a \$0.20 per pound or less price premium. Another third of the producers would need a premium between \$0.30 and \$0.50 per pound to produce grass fed beef.

On average, grass fed beef would have to command a price premium of about \$0.38 per pound to attract potential producers. The median value is very similar, \$0.40 per pound. This is a significant price premium but one that is needed to entice potential cooperative members and secure cattle for the facility.

Premium per Pound	Percent (n=100)
\$.00	14%
\$.10	10%
\$.20	14%
\$.30	11%
\$.40	11%
\$.50	7%
\$.60	1%
None of the above	32%
Mean (per pound)	\$0.38
Median (per pound)	\$0.40

Interest in Cooperative

The respondents were then asked if they were able to receive a premium comparable to what they mentioned earlier in the survey, would they be interested in joining a cooperative of farmers whose sole purpose is the producing, harvesting and marketing of grass fed beef. Approximately half of the respondents indicated they would be willing to produce grass fed beef for some premium level. Of the 64 respondents that would produce grass fed beef, 80 percent or 48 producers would be willing to join the proposed cooperative. This is very encouraging and shows support for the proposed grass fed beef cattle cooperative.

Interested	Percent n=64
Yes	80% or 48 producers
No	20% or 16 producers

Cattle Commitment

More importantly, it is critical to estimate the number of cattle that might be committed to the cooperative. The inability to secure a sufficient supply of grass feed beef would hinder the proposed cooperative ineffective and render the proposed slaughter facility economically infeasible.

To address the issue of supply, those respondents that were interested in joining the cooperative were asked how many cattlemen would they be willing to supply to the proposed cooperative. On average, the respondents are willing to supply 74 head per operation to the cooperative. This number is skewed toward the large producers and the median figure of 50 is a better indication of intent.

Number	%
1	2%
15	2%
16	2%
20	7%
22	2%
25	5%
30	5%

60	12%
100	14%
120	2%
125	2%
150	5%
200	2%
321	2%
400	2%
Mean	74
Median	50

Willingness to Adopt Natural/Organic Production Techniques

Of those respondents that were willing to join the cooperative and contribute cattle, 74 percent indicated they would be willing to adopt only natural or organic production technologies and a certain breed or cross-breed in order to participate in the cooperative (Table 9). These results are very encouraging and suggest that the producers are willing to try new techniques to increase the value of their livestock.

Table 8. Willingness to use Natural/Organic Production Techniques	
	Percent n=46
Yes	74%
No	26%

Other Meat Animal Production

The respondents were then asked if they produced any other meat animal species that could be custom harvested and processed. Nearly all of the respondents (94 percent) indicated that they either did not produce or were not interested in having other meat animals processed through the cooperative.

The Center for Agribusiness & Economic Development

The Center for Agribusiness and Economic Development is a unit of the College of Agricultural and Environmental Sciences of the University of Georgia, combining the missions of research and extension. The Center has among its objectives:

To provide feasibility and other short term studies for current or potential Georgia agribusiness firms and/or emerging food and fiber industries.

To provide agricultural, natural resource, and demographic data for private and public decision makers.
